INSTA

ALLATION

When access becomes complex, execution must remain simple.

At M2i, every project begins with the integration of key constraints: difficult access, remote locations, or tight installation tolerances. Our teams adapt their methods to ensure controlled, safe, and precise execution at all times.

From planning through to completion, we deliver turnkey mechanical and hydraulic projects, including on-site testing, always supported by our engineering teams.

A well-planned site
is a well-controlled site.

PROJECT MANAGEMENT

In environments where multiple stakeholders must work side by side and where margins for error are minimal, preparation makes all the difference. M2i supports its clients with rigorous planning and on-site coordination across budget, technical, and safety aspects.

Even in the face of unforeseen challenges, we help deliver projects on schedule, reduce HSE risks, and ensure optimal execution quality.

MAINTENANCE

Equipment reliability starts in the field.

M2i teams carry out maintenance, inspection, and commissioning of mechanical and hydraulic equipment. Our electromechanics and specialized technicians perform a wide range of interventions, including CWB-certified welding and scheduled equipment maintenance.

M2i

Through a proactive approach and a strong health and safety culture, we help our clients keep their equipment running and prevent unplanned outages, thereby reducing overall risk.

MECAN-

-HYDRO

Behind every M2i intervention stands the full expertise of Mecan-Hydro.

As an installation and maintenance division, M2i is backed by specialists in engineering, manufacturing, and custom hydromechanical equipment design.

This synergy enables the development of innovative technical solutions adapted to real site conditions.

From concept to installation, Mecan-Hydro and M2i teams work together to deliver reliable, durable, and tailored solutions.

CUSTOMER CERTIFICATE

ATIONS

Trusted by the market.

For over 30 years, Mecan-Hydro and M2i teams have supported energy producers, industrial clients, and public organizations in the execution and maintenance of hydromechanical infrastructure.
